

# Human Computer Interaction

## Week 9: Bootstrap, jQuery, Leaflet

by Henrik Lange

Sometimes  
IT ENDS UP  
DIFFERENT  
AND IT IS  
Better  
THAT WAY

## Plan

- Week 1: Setting The Stage
- Week 2: Mapping, Personas and Journeys
- Week 3: Sketching
- Week 4: Decisions and Storyboards
- Week 5: Prototyping
- Week 6: Prototype Testing
- Week 7: Graphic Design
- Week 8: Building Modern UI (CSS)
- Week 9: Building Modern UI (Bootstrap, jQuery & Leaflet)
- Week 10: Accessibility and
- Week 11: Usability Testing
- Week 12: Building Modern UI

# Detailed Plan for rest of semester

Tuesday Nov. 16th	Tuesday Nov. 23th	Tuesday Nov. 29th	Tuesday Dec. 6th	Tuesday Dec. 14th
Week 8 Lecture 8+9	Week 9 Lecture 10+11	Week 10 Instructor Class	Week 11 Instructor Class	Week 11 Recorded Lecture 12
Lecture: Live in classroom 8-12	Lecture: Live in classroom 8-12	Lecture: No Lecture	Lecture: No Lecture	Lecture: <i>Recorded</i> <i>Available Tuesday Morning</i>
Exercises: No exercise class	Exercises: No exercise class	Exercises: Instructor class 8-12	Exercises: Instructor class 8-12	Exercises: None

SDU

Portfolio Hand-in  
*Dec. 13th*

# Agenda

→ Bootstrap

→ jQuery

→ Leaflet

→ Exercises

# This Week: Bootstrap, jQuery & SDEaflet

# Bootstrap getting started

- Build **responsive**, **mobile-first** projects on the web with the world's most popular **front-end** component library.
- Bootstrap is an open source toolkit for developing with HTML, CSS, and JS. Quickly prototype your ideas or build your entire app with our Sass variables and mixins, responsive grid system, extensive prebuilt components, and powerful plugins built on **jQuery**.

# Bootstrap getting started

- Responsive
- Mobile-first
- Front-end
- HTML and CSS
- jQuery.

# Bootstrap getting started

- In the HTML head:
  - CSS
- In the bottom of the body
  - JavaScript

```
<link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css"
      integrity="sha384-BVYiISIFeK1dGmJRAkycuHAHRg32OmUcww7on3RYdg4Va+PmSTsz/K68vbdEjh4u"
      crossorigin="anonymous">
```

```
<script src="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/js/bootstrap.min.js" integrity="sha384-
      Tc5lQib027qvyjSMfHjOMaLkfuWVxZxUPnCJA7I2mCWNlP9mGCD8wGNlCPD7Txa"
      crossorigin="anonymous"></script>
```

- Or download it and include it like any other JavaScript
  - <https://getbootstrap.com/docs/4.3/getting-started/introduction/>

# Jumbotron

# Hello, world!

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

It uses utility classes for typography and spacing to space content out within the larger container.

[Learn more](#)

```
<div class="jumbotron">
  <h1 class="display-4">Hello, world!</h1>
  <p class="lead">This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.</p>
  <hr class="my-4">
  <p>It uses utility classes for typography and spacing to space content out within the larger container.</p>
  <p class="lead">
    <a class="btn btn-primary btn-lg" href="#" role="button">Learn more</a>
  </p>
</div>
```

</button>
<button type="button" class="btn btn-secondary" data-toggle="tooltip" data-placement="left" title="Tooltip on left">
  Tooltip on left
</button>
```

And with custom HTML added:

```
<button type="button" class="btn btn-secondary" data-toggle="tooltip" data-html="true" title="<em>Tooltip</em> <u>with</u> <b>HTML</b>">
  Tooltip with HTML
</button>
```

SDU

# jQuery.com

“jQuery is a fast, small, and feature-rich **JavaScript** library. It makes things like **HTML document traversal** and **manipulation**, **event** handling, **animation**, and **Ajax** much simpler with an easy-to-use API that works across a multitude of browsers. With a combination of versatility and extensibility, jQuery has changed the way that millions of people write **JavaScript**.”

# Why jQuery?

- Used in tons of production systems
  - Most?
- Automatically included and used in .net templates
- Some people can't tell the difference between jQuery and JS
  - You must be able to!
  - Just look up any JS problem on stackoverflow, and the replies will be for jQuery

# jQuery History

- Created in 2006
  - To make it easier to write JavaScript
  - To make cross-browser compatibility simpler
  - “Write less, do more”
- 
- With EcmaScript 6 (EC6), JavaScript is as easy to write as jQuery in almost **all** cases
- 
- But you WILL run into it
  - Again and again
  - And possibly have to work with it.

- Whenever you see a \$ in JavaScript, you should think jQuery
- jQuery is JUST JavaScript!
- \$ is a legal character in JavaScript
- jQuery uses \$ heavily

# Getting Started

→ In your HTML body bottom:

```
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.3.1/jquery.min.js"></script>
```

→ Or download it and include it like any other JavaScript

→ If you use **Bootstrap**, you most already have it on your site!

# Getting Started

→ In your HTML head:

```
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.3.1/jquery.min.js"></script>
```

→ Or download it and include it like any other JavaScript

→ If you use **Bootstrap**, you most already have it on your site!

# On Page Load

→ Do something when page loads:

## jQuery

```
$(document).ready(function() {  
  //your code...  
});
```

## JavaScript

```
document.onload = function () {  
  //your code...  
}
```

# Find DOM element

→ Find DOM element

## jQuery

```
$('#div.menu .selected');
```

```
$('#div.menu .selected')  
  .html('new content');
```

```
$('#div.menu .selected')  
  .css('color', 'red');
```

## JavaScript

```
document.querySelector('div.menu .selected');
```

```
document  
  .querySelector('div.menu .selected')  
  .innerHTML = 'new content';
```

```
document  
  .querySelector('div.menu .selected')  
  .style.Color = 'red';
```

# Experiment

→ We use q instead of \$ to avoid confusion

## jQuery

```
$('#div.menu .selected');
```

→ jQuery selectors can go beyond the JS query selector  
→ p:contains('specific words')

## JavaScript

```
function q (search) {  
  return document.querySelector(search);  
}
```

```
q('div.menu .selected');
```

# Find DOM element

→ Find DOM element

## jQuery

→ Change innerHTML  
`$('#div.menu .selected');`

→ Change style  
`$('#div.menu .selected')  
.html('new content');`

→ Change attribute

`$('#div.menu .selected')  
.css('color', 'red');`

`$('#img').attr('src', 'newImage.png');`

## JavaScript

`q('div.menu .selected');`

`q('div.menu .selected')  
.innerHTML = 'new content';`

`q('div.menu .selected')  
.style.Color = 'red';`

`q('img').src = 'red';`

# Add / Remove Class

→ Add Class

## jQuery

```
$("#whatever")  
  .addClass("anotherClass");
```

## JavaScript

```
q("#whatever")  
  .classList  
  .add("anotherClass");
```

→ Toggle class

```
$("#whatever")  
  .removeClass("anotherClass");
```

```
q("#whatever")  
  .classList  
  .remove("anotherClass");
```

```
$("#whatever")  
  .toggle("anotherClass");
```

```
q("#whatever")  
  .classList  
  .toggle("anotherClass");
```

# Add Events

## jQuery

```
$("#button.myButton")  
  .click(function() {  
    //event  
  });
```

```
$("#button.myButton")  
  .hover(function() {  
    //event  
  });
```

```
$("#button.myButton")  
  .dblclick(function() {  
    //event  
  });
```

## JavaScript

```
q("button.myButton")  
  .addEventListener("click", function() {  
    //event  
  });
```

```
q("button.myButton")  
  .addEventListener("hover", function() {  
    //event  
  });
```

```
q("button.myButton")  
  .addEventListener("dblclick", function() {  
    //event  
  });
```

# Find Mouse Position

## jQuery

```
$("#button.myButton")
  .click(function(e) {
    $('#posX').val(e.pageX);
    $('#posX').val(e.pageY);
  });
```

## JavaScript

```
q("button.myButton")
  .addEventListener("click", function(e) {
    var posX = clientX;
    var posY = clientY;
  });
```

## jQuery

```
$("#button.myButton")
  .move(function(e) {
    $('#posX').val(e.screenX);
    $('#posX').val(e.screenY);
  });
```

## JavaScript

```
q("button.myButton")
  .addEventListener("mousemove",
function(e) {
    var posX = clientX;
    var posY = clientY;
  });
```

# Tables

## jQuery

```
$("#myTable tr:first")
  .css("background-color", "blue");
$("#myTable tr:even")
  .css("background-color", "white");
$("#myTable tr:odd")
  .css("background-color", "grey");
```

## CSS

```
#myTable tr:first-child {
  background-color: white;
}
#myTable tr:nth-child(even) {
  background-color: white;
}
#myTable tr:nth-child(odd) {
  background-color: grey;
}
```

First	Row	Blue
Even	Row	White
Odd	Row	Grey
Even	Row	White
Odd	Row	Grey

# AJAX

```
<div>Ajax: <span id="ajaxContent"></span></div>
```

## jQuery

```
$.ajax({
  type: "GET",
  url: "someServerService.php",
  success: function(text) {
    $('#ajaxContent').text(text);
  },
  error: function(XMLHttpRequest, textStatus,
    errorThrown) {
    $('#ajaxContent').text('Error: ' +
      errorThrown);
  }
});
```

## JavaScript fetch

```
fetch('someServerService.php')
  .then(function(response) {
    return response.text();
  })
  .then(function(text) {
    q('#ajaxContent').innerHTML = text;
  })
  .catch(function(error) {
    q('#ajaxContent').innerHTML = 'Request failed: ' +
      error;
  });
```

## JavaScript XMLHttpRequest

```
var xmlhttp = new XMLHttpRequest();
xmlhttp.onreadystatechange = function() {
  if(this.readyState == 4 && this.status == 200) {
    q('#ajaxContent').innerHTML = this.responseText;
  } else {
    q('#ajaxContent').innerHTML = 'Request failed: ' +
      this.responseText;
  }
}
xmlhttp.open("GET", "someServerService.php", true);
xmlhttp.send();
```

# Leaflet

- “Leaflet is the leading open-source JavaScript library for mobile-friendly interactive maps”
- “Leaflet is designed with simplicity, performance and usability in mind. It works efficiently across all major desktop and mobile platforms, can be extended with lots of plugins, has a beautiful, easy to use and well-documented API and a simple, readable source code that is a joy to contribute to.”

<https://leafletjs.com/examples/quick-start/>

# Leaflet – get started

- Import leaflet in HTML head
- Remember to set viewport!

```
<meta name="viewport" content="width=device-width, initial-scale=1.0">  
<link rel="stylesheet" href="https://unpkg.com/leaflet@1.0.2/dist/leaflet.css">  
<script src="https://unpkg.com/leaflet@1.0.2/dist/leaflet.js"></script>
```

```
<div id="map" style="width: 700px; height: 400px;"></div>
```

<https://leafletjs.com/examples/quick-start/>

# Leaflet – get started

→ Set centrum coordinates in JavaScript

```
var map = L.map('map').setView([56.255, 10.08], 12);
```

→ Set a tile layer

```
L.tileLayer('http://{s}.tile.osm.org/{z}/{x}/{y}.png', {  
  attribution: '&copy; <a href="http://osm.org/copyright">OpenStreetMap</a>  
  contributors'  
}).addTo(map);
```

→ You now have a live map!

→ Scrolling and zooming is enabled by default

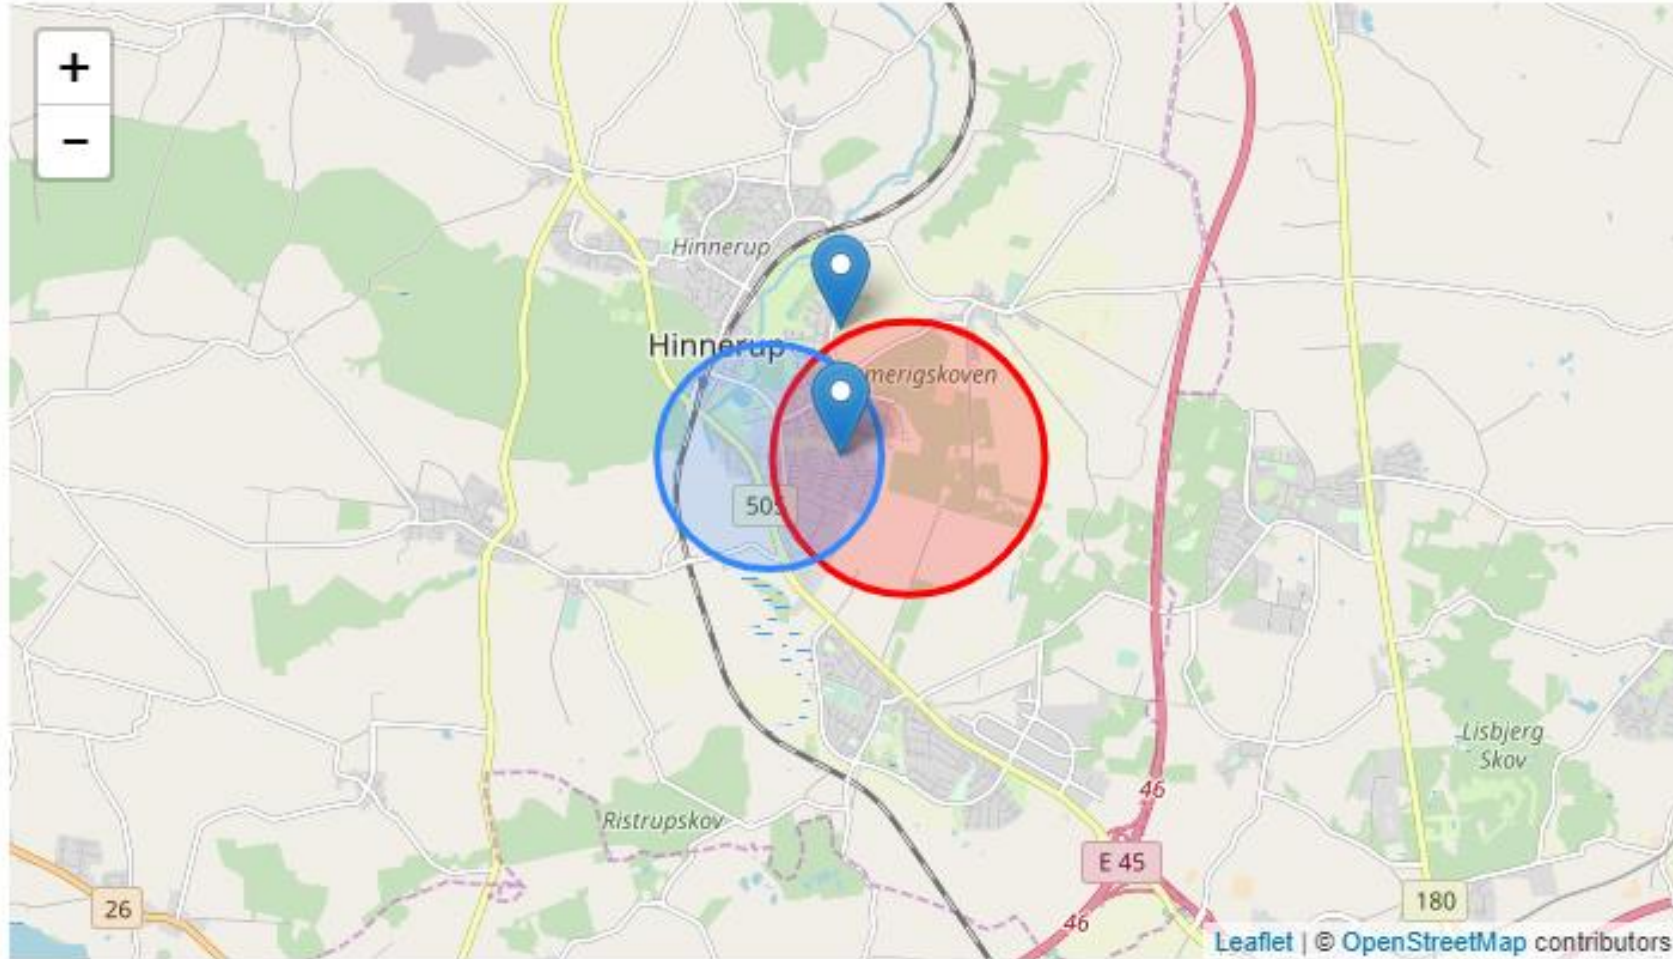

<https://leafletjs.com/examples/quick-start/>

# Leaflet – get started

- Add circles and markers with optional popups
  - Popups support rich HTML

```
L.circle([56.2568605075, 10.0888809242], 1200, {color: "red"})  
  .bindPopup('Popup for <span style="color: #f00;">red</span> circle.')  
  .addTo(map);  
  
L.circle([56.2569805095, 10.0688809249], 1000).addTo(map);  
  
L.marker([56.2569805095, 10.0788809249]).addTo(map)  
  .bindPopup('Popup for <span style="color: #00f;">blue</span> marker')  
  .openPopup();  
  
L.marker([56.2669805095, 10.0788809249]).addTo(map)  
  .openPopup();
```

# Leaflet – get started

# Google Charts

# Google Charts

→ Import in HTML Body Bottom

```
<script type="text/javascript" src="https://www.gstatic.com/charts/loader.js"></script>
```

→ Make placeholder div in HTML body

```
<div id="chart_div"></div>
```

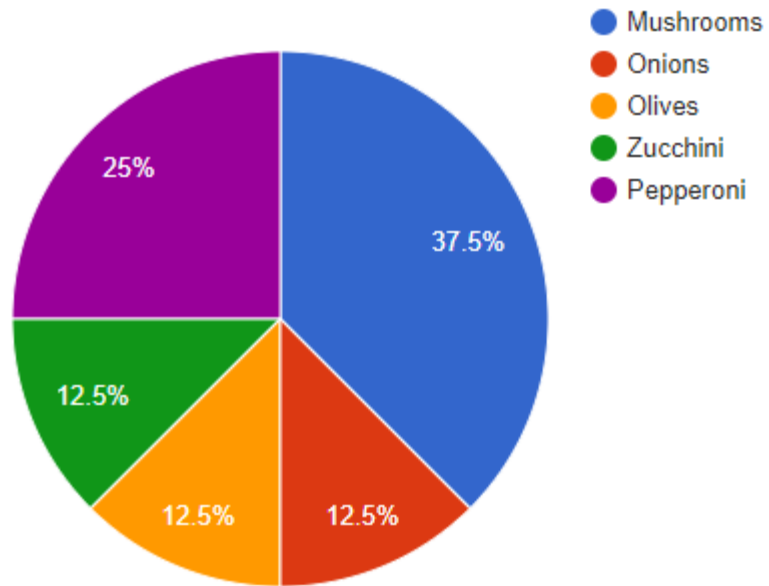

→ We can now use the charts to populate the div in various ways

→ <https://developers.google.com/chart/interactive/docs/gallery>

# Google Charts

How Much Pizza I Ate Last Night

```
google.charts.load('current',
  {'packages':['corechart']});
google.charts.setOnLoadCallback(drawChart);

function drawChart() {

  var data = new google.visualization.DataTable();
  data.addColumn('string', 'Topping');
  data.addColumn('number', 'Slices');
  data.addRows([
    ['Mushrooms', 3],
    ['Onions', 1],
    ['Olives', 1],
    ['Zucchini', 1],
    ['Pepperoni', 2]
  ]);

  var options = {'title':'How Much Pizza I Ate Last Night',
                 'width':700,
                 'height':500};

  var chart = new
  google.visualization.PieChart(document.getElementById('chart_div'));
  chart.draw(data, options);
}
```

# Google Charts

Company Performance  
Sales, Expenses, and Profit: 2014-2017

```
google.charts.load('current', {'packages':['bar']});  
google.charts.setOnLoadCallback(drawChart);
```

```
function drawChart() {  
    var data = google.visualization.arrayToDataTable([  
        ['Year', 'Sales', 'Expenses', 'Profit'],  
        ['2014', 1000, 400, 200],  
        ['2015', 1170, 460, 250],  
        ['2016', 660, 1120, 300],  
        ['2017', 1030, 540, 350]  
    ]);
```

```
    var options = {  
        'width':700,  
        'height':500,  
        title: 'Company Performance',  
        subtitle: 'Sales, Expenses, and Profit: 2014-  
2017',  
    };
```

```
    var chart = new  
    google.charts.Bar(document.getElementById('chart_  
div'));  
    chart.draw(data, google  
        .charts.Bar.convertOptions(options));  
}
```

# Google Charts

Box Office Earnings in First Two Weeks of Opening  
in millions of dollars (USD)

■ Guardians of the Galaxy  
■ The Avengers  
■ Transformers: Age of Extinction

```
google.charts.load('current', {'packages':['line']});  
google.charts.setOnLoadCallback(drawChart);
```

```
function drawChart() {  
    var data = new google.visualization.DataTable();  
    data.addColumn('number', 'Day');  
    data.addColumn('number', 'Guardians of the  
Galaxy');  
    data.addColumn('number', 'The Avengers');  
    data.addColumn('number', 'Transformer: AOE');
```

```
    data.addRow([  
        1, 37.8, 80.8, 41.8],  
        ...  
        [14, 4.2, 6.2, 3.4]  
    ]);
```

```
    var options = {  
        title: 'Box Office in First Two Weeks',  
        subtitle: 'in millions of dollars (USD)',  
        width: 900,  
        height: 500  
    };
```

```
    var chart = new

# Exercises: Use Frameworks SDU

- Use Bootstrap, jQuery, Leaflet and Google Charts
- **Only put the frameworks in your project that it needs!**
- Play around with all of them, but don't put them all in your project
- Bootstraps menu system and grid system makes sense in most projects
- Many of you had maps in your project – built that with Leaflet
- If you need to show data charts, use Google Charts
- What attendance should we expect in tomorrows instructor sessions?

You are now  
**ALLOWED** to use  
**Bootstrap, jQuery,  
Leaflet and Google  
Charts**
